Panasonic
BUSINESS

Linking Business with Versatile Mobility

Panasonic Mobile Softphone is a simple application that brings audio and visual communication together in your mobile device. It lets you use your smartphone just the way you want, while maximizing mobility and minimizing costs.
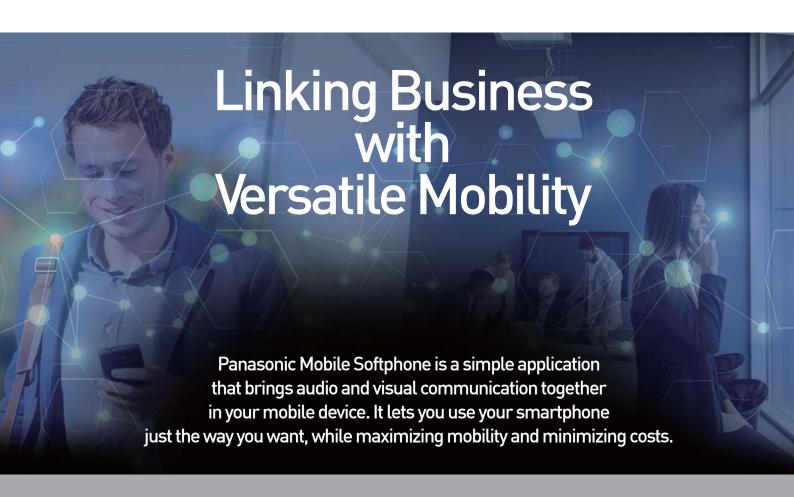

Seamless Connection as PBX Extension

The employee's smartphone can be registered as a company extension number with the Mobile Softphone application. It enables flexible audio and video calls in/out of offices without using your private phone number.

Push Notification

Call Notification

Push Notification informs you of incoming calls without having to start up an application. Since the application does not need to be constantly running, your smartphone battery lasts longer.

Panasonic

* Push Notification is not supported when using the KX-NS1000 and KX-HTS system.

Immediate Use -No Server Needed

Since there is no need for an additional server or other equipment, you can link your smartphone up immediately with no other changes to your system. Also, Mobile Softphone supports SIP-TLS* (Transport Layer Security). It prevents spoofing risks.

* SIP-TLS is not supported when using the KX-NS1000 and KX-HTS Series. TLS is a protocol that guarantees privacy and data integrity over the internet.

Uses Only Panasonic Products

From hardware to application, every component is designed and manufactured by Panasonic to greatly simplify system management.
